

Nicolò Bartolini

Software engineer

Professional profile

Software engineer with a master's degree in Computer and Automation Engineering, experienced in backend and full-stack web application development, system integration and relational database management. I have worked on legacy code refactoring, SQL query optimization, Docker, basic AWS infrastructure and end-to-end application features. I am interested in growing in backend and full-stack roles, with a focus on maintainable software, service integration and user experience quality.

Work experience

Present
↑

Software engineer

NBS Srl, San Benedetto del Tronto (AP), Italy

- Development and testing of backend and database-oriented solutions in an enterprise context, with a focus on system integration, data management and application security.
- Design and implementation of row-level security (RLS) policies on PostgreSQL to support data separation in a multi-tenant data warehouse test environment.
- Writing and optimization of advanced SQL queries on PostgreSQL and Oracle for monitoring logic, SLA calculation and support of application processes.
- Contribution to the revision of relational schemas and dynamic configurations, in collaboration with the technical team, to improve the flexibility of application logic management.
- Prototyping of token-based authentication logic for integration between distributed applications.

Full-stack developer

MASSIVE SAS, San Benedetto del Tronto (AP), Italy

- Full-stack development of a web-based property management system (PMS) and booking engine built with Symfony, independently handling technical analysis, implementation, deployment and testing.
- Refactoring of legacy backend code to improve security, maintainability and performance, achieving a measured reduction of approximately 20% in page loading times.
- Implementation of Revolut payment gateway integration in a test/pre-production environment.
- Significant frontend migration from a legacy stack based on templates, Vue 2 and jQuery to Symfony UX, Turbo and Tailwind CSS.
- Containerization of the application with Docker and optimization of the deployment pipeline, reducing release time from approximately 9 to 3 minutes.
- Basic management of application infrastructure on AWS EC2 and SES.

Languages

Italian	Native
English	Upper-intermediate (B2)

Skills

Hands-on experience

SQL, PostgreSQL, Oracle, PHP, Symfony, Java, JavaScript, TypeScript, Docker, Git, HTML, CSS, Tailwind CSS, Symfony UX

Project and academic experience

Python, Django, Django REST Framework, AWS EC2/SES, MySQL/MariaDB, Swift/SwiftUI, applied machine learning, data processing

Complementary knowledge

MongoDB, Kotlin, Flutter, Bootstrap, Linux, Postman

IT research collaborator

Università Politecnica delle Marche (D3A), Ancona, Italy

- Development of machine learning algorithms and software tools to support scientific research activities on solid bio-fuels.
- Development of a Django web application for managing and visualizing experimental data, used internally by the laboratory.
- Contribution to data analysis and software-related activities within the context of a scientific publication.

Education

October

↑
September
2023

Master's degree in Computer and Automation Engineering

Università Politecnica delle Marche, Ancona, Italy

Curriculum focused on software development, backend development and artificial intelligence. **Final grade: 110/110 cum laude.**

Degree class: LM-32, Computer Engineering

October
2023

September
2020

Bachelor's degree in Computer and Automation Engineering

Università Politecnica delle Marche, Ancona, Italy

Curriculum focused on software development and information engineering. **Final grade: 104/110.**

Degree class: L-08, Information Engineering

Thesis

October
2025

Master's thesis

Analysis of forest dynamics using Sentinel-2 and PlanetScope satellite time series: classification of logged areas

Design and experimentation of deep learning models for the analysis of multi-source geospatial data, using Python and libraries for image processing and geo-processing.

October
2023

Bachelor's thesis

Design and implementation of an iOS social network in SwiftUI for cinema enthusiasts

Development of a native iOS mobile application, with a focus on software architecture, UI/UX and external API integration.
